

BSF-event = activation of **50ms** TASK

- A snapshot trace spans ca. 110ms and two complete BSFs (with BSF-event = activation of **50ms** TASK)
- The resulting max. CPU-load is **72.19%**

BSF-event = activation of **10ms** TASK

- When setting the BSF-event is to the activation of the **10ms** TASK “dr_10ms”, the *same trace* shows 11 BSFs (and still 110ms).
- However, the max CPU-load now is **85,39%**
